ISSN 0268-1161

Human reproduction
The cover of *Human Reproduction* shows smoke treatment-induced apoptosis in mouse preimplantation embryos. The top row shows Hoffman contrast images of 3-day old embryos incubated in control medium (A), 0.1 puff equivalents (PE) of Advance main-stream smoke solution (B) and 0.1 PE of Advance side-stream smoke solution (C). The bottom row shows the same embryos viewed under fluorescence to visualise activated caspases 3 and 7. For further details see Lin et al. pp. 386–397.
